DETAILED ACTION

Status of Claims

1. Applicant's reply filed on 11/13/2007 is acknowledged. Current pending claims are 1-10, 12-16, 18-21, and 23-28. Claims 1, 12, and 20 have been amended. Claims 11, 17, and 22 are cancelled. Claims 26-28 are new.

Response to Arguments

2. Applicant's amendment's filed on 11/13/2007 are acknowledged. The applicant has amended the independent claims to incorporate the limitations of the dependent claims containing previously indicated allowable subject matter; therefore, the previous art rejections are withdrawn. It should be noted; however, that upon further review, a new ground(s) of rejection was considered. It was suggested that the applicant claim the "force sensing" means in the independent claims (to which the applicant agreed in submitting the 11/13/2007 amendment) to overcome this possible rejection – see reasons for allowance below.

Drawings

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "216" and "244" and "242" and "230" and "250" have been used interchangeably in the drawings. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is

being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

4. Claims 1-10, 12-16, 18-21, and 23-28 are allowed.
5. The following is an examiner's statement of reasons for allowance: Buser et al. (US Patent No. 5881746) does not teach a force sensor sensing a force resisting closure of the door by the electric actuator. Moriyama et al. (JP Patent Publication No. JP6328940) teaches a force sensor for a car door but does not teach or suggest the force sensing means (spring-biased element connected to an electrical switch -- or functional equivalent) and instead teaches a rotating-type sensor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
